CAD Drawing Resource
Philip Pank Partnership

Client Testimonial

"I was delighted to find C A Design Services with its wide range of CAD technical drawing and associated services. The drawing team has a great "can do" attitude, finding ways of overcoming obstacles such as file compatibility so that we could all access the information we need. Ultimately the drawing packages were delivered accurately and on time with the relevant document control which meant I could meet my contractual requirements.

I would confidently recommend CADS technical CAD drawing resource and will be using them regularly in future to enable me to manage a larger number of projects than we have the resource in house to deliver"

Luca Speroni
Project Surveyor - Philip Pank Partnership

Residential Flats - North Elevation

Residential Flats - South Elevation

Project History

Philip Pank Partnership is a practice of chartered surveyors, construction and property consultants with offices in London, Abingdon, West Malling and Brighton. The Partnership works closely with a number of local authorities including 13 London Boroughs and various housing association. The company also helps developers identify relevant Registered Social Landlords with a Section 106 affordable housing requirement.

The Challenge

One of Philip Pank's Project Surveyors, Luca Speroni, contacted C A Design Services in March 2015. He was seeking a knowledgeable and professional CAD drawing resource that he could call on when workloads required.

The first project where the PPP team required CAD drawing support was for the refurbishment of three blocks of residential flats for one of their London Council clients.

For each of the three external refurbishments Philip Pank required the preparation of drawings for planning submissions and for one of the blocks of flats, a building control application. Each project required the creation of existing drawings including plans and elevations from a combination of available information comprising pdf drawings, survey data, sketches and photos.

CADS create these drawing packages accurately, overcoming technical challenges such as file capability issues, and submitted them to PPP in a timely manner.
